

K1 Fresh Milk

Bean to Cup Machine

The K1 Fresh Milk is a compact bean to cup coffee machine designed for reliable daily performance in smaller commercial environments. With fresh milk capability, dual thermoblock technology and a high-precision grinder, it delivers a wide range of café-style drinks with speed and consistency. Simple touchscreen operation and flexible water options make it an ideal solution for offices and customer-facing spaces serving up to 40 cups per day.

LIQUIDLINE
Altogether better

K1

Fresh Milk

Designed for convenience and consistency, the K1 Fresh Milk combines automated brewing with fresh milk preparation in a compact machine. Large-capacity internal components support all-day operation, while intelligent cleaning and rinsing systems help maintain hygiene and performance, ensuring every cup is prepared to the same high standard all day, every day.

HIGH-EFFICIENCY DUAL SYSTEMS

Dual thermoblocks and dual pumps allow coffee extraction and milk frothing to run simultaneously, reducing preparation time and improving workflow. This high-efficiency system supports fast service of cappuccinos and lattes while maintaining stable temperature control for consistent drink quality.

ADVANCED FRESH MILK FROTHING

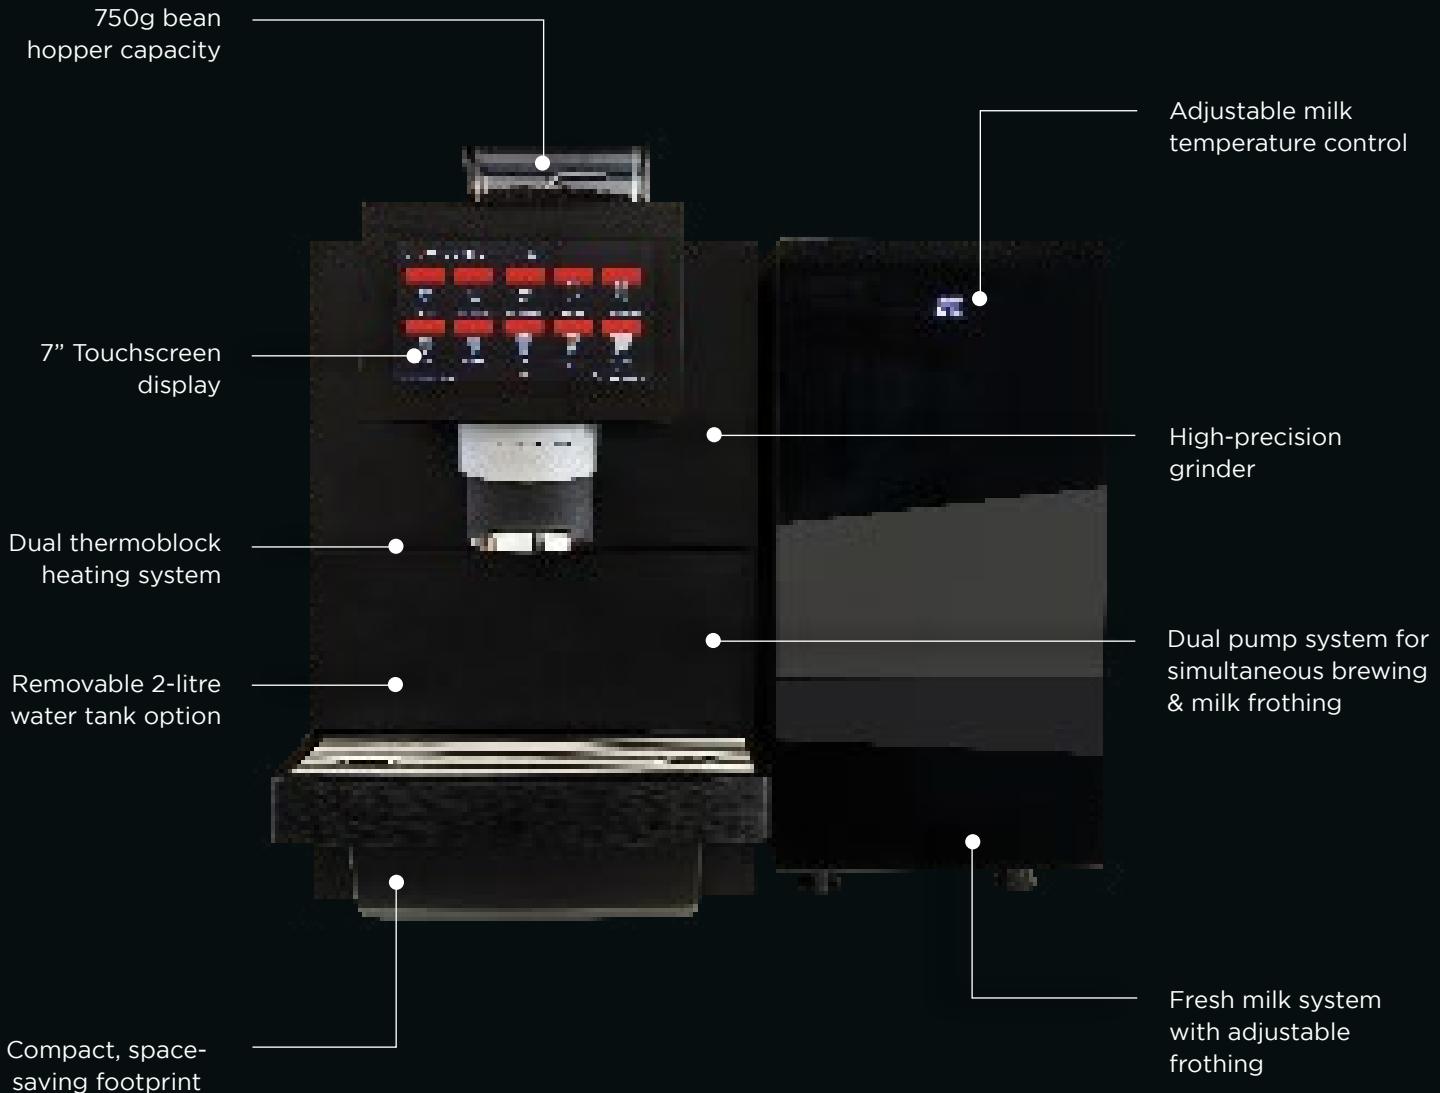

The K1's upgraded milk froth system allows precise adjustment of milk flow and temperature, delivering smooth, high-quality foam for a wide range of milk-based drinks. This flexibility helps create consistent texture and flavour across cappuccinos, flat whites, and lattes, supporting professional results with minimal manual input.

INTUITIVE TOUCHSCREEN OPERATION

A 7-inch colour touchscreen with one-touch drink selection simplifies daily operation and recipe adjustment. Beverage settings can be easily adjusted quickly while maintaining fast and consistent preparation, making the K1 Fresh Milk well-suited to busy workplaces and shared-use environments.

INTELLIGENT CLEANING & RINSING

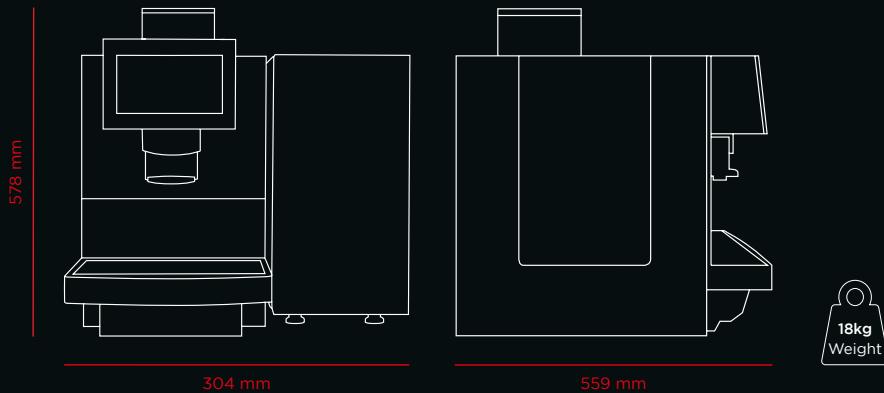

Automatic rinsing before and after brewing, combined with intelligent cleaning reminders, helps keep internal components clean and free from residue. This system supports hygiene, protects flavour quality and reduces daily maintenance effort, helping ensure reliable performance over long operating periods.

“

The K1 offers fresh milk performance in a compact unit, for reliable everyday service in smaller spaces!”
